Final-year Artificial Intelligence student experienced in building and deploying AI and software applications across Generative AI, Computer Vision, NLP, and data analytics. Skilled in Python, ML/DL, REST APIs, databases, cloud deployment, and performance optimization. Strong problem-solving skills with a focus on building reliable and practical software solutions.

Experience

AI Engineer Intern | Carbonrepro | Aug 2026 – Present

- Redesigned a healthcare CDI Agent initially relying on LLM-based ICD-10/HCC predictions by implementing a RAG pipeline with MediPhi-Instruct SLM for extracting diagnoses from doctor notes, Qdrant vector search for retrieving relevant ICD-10 codes, and CMS clinical coding data for mapping them to HCC categories while reducing hallucination risks.

Software Engineer Intern | Logics Lab | Jun 2025 – Jul 2025

- Developed and deployed a Flask web app for on-demand REST API data retrieval, Pandas-based filtering, and interactive student record search.

Projects

BU Chatbot | RAG, LLMs, FastAPI, Vector Databases, JWT Authentication, Cloud Deployment, Performance Optimization

- Built a RAG-based university rulebook chatbot using LangChain, MongoDB Atlas Vector Search, Groq, and Clerk authentication, with conversational memory.
- Containerized and deployed the backend on Azure with a Vercel-hosted frontend, reducing response latency from 55s to 5s.

NYC Fare Predictor | SQL, EDA, Big Data Analysis, Business Rule Engineering, Ensemble ML Models, Hugging Face Spaces

- Developed a hybrid NYC taxi fare prediction system using 40M+ trip records, combining five ML models for variable fare components with EDA-driven business rules for fixed charges.
- Achieved 8.5% average prediction error and deployed an optimized CPU inference pipeline on Hugging Face Spaces.

Zero-Shot Character Detection & Tracking | Metric Learning, Multi-Object Tracking, Inference Optimization

- Developed a zero-shot anime character detection and tracking pipeline using fine-tuned DEIMv2, LoRA-adapted DINOv3, and vector similarity search for character re-identification across images and videos without retraining.
- Optimized inference with ONNX, processing 1 second of video in approximately 2.5 seconds on GPU.

Technical Skills

- Programming:** Python, C++, Java
- AI/ML:** Machine Learning, Deep Learning, Computer Vision, NLP, Generative AI, SLMs, LLMs, RAG, Prompt Engineering
- Data/Backend:** SQL, MongoDB, Qdrant, REST APIs, FastAPI, Pandas, NumPy, Scikit-learn
- Tools/Deployment:** PyTorch, TensorFlow, OpenCV, LangChain, Git, GitHub Actions, Docker, Linux, Azure, Vercel, ONNX

Education

BS in Artificial Intelligence | Bahria University | Karachi Campus

- Currently in 7th semester with 3.3/4.0 CGPA
- Co-founded and led the ACCP Club Arts Team, managing a 26-member creative team responsible for event branding and artwork recognized by university directors and featured at official events.

Intermediate in Pre-Engineering | Bahria College Karsaz | Karachi Board

- Graduated with Grade A
- Served as Captain of the Table Tennis Team for the House in the Interhouse League, leading the team to a runner-up finish.

Certifications

- Model Context Protocol - Anthropic
- DevOps to MLOps Bootcamp - Packt
- Deep Learning with Keras and TensorFlow - IBM
- Advanced Data Analytics - Google
